

# Community Solar

## Here's how it works!

Community Solar projects in your area produce clean energy. You sign up for a project — no roof or homeownership necessary!

Electricity generated from the project is sent to your utility provider (PSEG, etc.), increasing the amount of solar-generated electricity, and reducing fossil fuel-generated energy

Your lights continue to turn on as usual — no installation, no additional fees, no downtime

Arcadia will manage your utility bill and community solar credits to provide a summarized and seamless billing experience

Your sign up helps reduce New Jersey's energy dependence on fossil fuels and puts us on the path to a greener, cleaner future
