

Asthma Prevalence and Transportation Corridors in Jersey City

Jersey City has the highest adult asthma prevalence rates in Hudson County and above-average rates compared to the entire State of New Jersey. The surrounding region also has above-average adult asthma prevalence rates. In 2020, Hudson County received an F for Air Quality from the American Lung Association.

This map shows Jersey City schools and their proximity to transportation corridors, including the proposed NJTA Turnpike Extension Expansion Route. The yellow (moderate), orange (high), and red (very high) coloring indicates percent crude prevalence of Asthma with increasing intensity (source: CDC Places).
